Notes: 1) Demand deposits and transferable savings deposits are included in outstanding amounts, but excluded from new deposits.

2) Overdrafts and other revolving loans are included in outstanding amounts, but excluded from new loans.

3) Loans to public and other sectors are also included.

※ Further statistics June be found at the Economic Statistics System website (<http://ecos.bok.or.kr/>).

## Notes to interest rates statistics

- The interest rates on outstanding deposits/loans are weighted averages of the interest rates applied to the stock of all deposits/loans as of the end of the month.
  - These statistics give information about changes in the interest rate margins and profitability of banks, as well as the amount of interest paid or received by households and corporations.
- The interest rates on new deposits/loans are weighted averages of the interest rates specified in new agreements during the reference month.
  - These statistics show the current lending and deposit interest rates faced by households and corporations, which provide useful information for customers in making financial decisions.

© Interest rates on outstanding deposits/loans

$$= \frac{\sum(\text{interest rates as of the end of the month} \times \text{outstanding amounts as of the end of the month})}{\sum(\text{outstanding amounts as of the end of the month})}$$

© Interest rates on new deposits/loans

$$= \frac{\sum(\text{interest rates on newly-handled amounts in month} \times \text{newly-handled amounts in month})}{\sum(\text{newly-handled amounts in month})}$$

- Fixed rate loans refer to loans where the interest rate remains constant at a certain level throughout the loan agreement period, while variable rate loans represent loans where the interest rate fluctuates periodically based on a specific rate.

Loans where interest rates are adjusted, but only at intervals of more than 5 years are classified as fixed. Hybrid loans indicate loans where loan interest conditions change after a certain period, and these are classified based on the loan interest conditions at that time.

- The figures for the current month are preliminary (indicated with a “p”) and are subject to revision in the following cases.
  - If there are supplements/changes to the basic data or revisions to the compilation standards, the previously released statistics June be revised.
