

## Producer Price Index during May 2025(preliminary)

- The Producer Price Index decreased by 0.4% month-on-month in May 2025 — in year-on-year terms it increased by 0.3%.
- The month-on-month changes in the major sub-indices are as follows:
- o Agricultural, forestry & marine products: -4.4%
  - o Manufacturing products: -0.6%
  - o Electric power, gas, water & waste: -0.6%
  - o Services: 0.2%

## Domestic Supply Price Index<sup>1)</sup> & Total Output Price Index<sup>2)</sup> during May 2025(preliminary)

- 1) The Index measures changes in the price of goods and services supplied to the domestic market by the stages of production.  
2) The Index measures changes in the price of goods and services produced by domestic producers.

- The Domestic Supply Price Index decreased by 1.4% month-on-month in May 2025 — in year-on-year terms it decreased by 1.0%.
- The month-on-month changes in the major sub-indices are as follows:
- o Raw materials: -5.6%
  - o Intermediate goods and services: -1.1%
  - o Final goods and services: -0.7%

### Domestic Supply Price Index

(%)

	Weight <sup>1)</sup>	Month-on-month				Year-on-year			
		2025				2025			
		Feb	Mar	Apr	May <sup>p</sup>	Feb	Mar	Apr	May <sup>p</sup>

The Indexes are preliminary and may be revised next month, < > : weight for 2025

## **1. How the Producer Price Index is Compiled**

### **1. Definition and Use**

- The Producer Price Index (PPI) measures changes in the price of goods and services produced and transacted in the domestic market. The index is used to measure business trend indicators, deflators, etc.

### **2. Frequency**

- The prices of goods and services are surveyed once a month.

### **3. Prices Surveyed: basic prices**

### **4. Items Subject to Survey**

- For goods and services, the transaction amounts in the domestic market of only those items accounting for more than 1/10,000 of the total transaction amount and more than 1/2,000 of the total transaction amount respectively, and those that represent price fluctuations of items under the same classification are surveyed.
- Items marked without comparable price quotations for considerable period, e.g., ships, weapons, aircraft, works of art, etc., are excluded.

### **5. Method of Compilation**

- Groups
  - Basic Groups -- The main five categories are: Agricultural, forestry & marine products; Mining products; Manufacturing products; Electric power, gas, water & waste; and, Services.
  - Specialized Groups -- Ten indexes fall under this classification: Foods/Excluding-foods; Fresh foods/Excluding fresh foods; Energy/Excluding energy; IT/Excluding IT; Excluding foods & energy; and, Excluding fresh foods & energy.

- **Weight:** Weight is the ratio in permillage that shows how much the domestic transaction value of a selected item and its similar ones accounts for the universe of possibilities. It represents the importance of each item in the overall index.

**Number of Items and Weight of Each PPI Category (as of 2025)**

Category		No. of items	Weight
Total Index		886	1,000.0
Basic	Agricultural, forestry & marine products	70	29.5
	Mining products	6	2.0
	Manufacturing products	687	489.7
	Electric power, gas, water & waste	14	82.3
	Services	109	396.5
Speciali- zed	Foods	152	67.1
	Excluding foods	734	932.9
	Fresh foods	45	12.2
	Excluding fresh foods	841	987.8
	Energy	20	89.4
	Excluding energy	866	910.6
	Information Technology	68	106.5
	Excluding information technology	818	893.5
	Excluding foods & energy	714	843.5
	Excluding fresh foods & energy	821	898.4

- **Formula:** A chain-weighted formula is used.
- **Quality Adjustment Method:** Methods such as production cost, direct comparison, overlapping, and imputation are generally employed to adjust for quality. The Hedonic regression method is applied to products such as Cellular phone, for example, whose qualities are quantifiable by objective numeric values.

## 6. Notes on Statistical Use

- The purpose of the PPI is to measure changes in the price, not to present absolute price levels.
- Prices of agricultural, forestry & marine products are bidding prices in wholesale markets rather than those at which farmers or fishers sell their products.
- The PPI may be compared with the Consumer Price Index (CPI), but should not be used to measure margins at the stages of producer and retail sales.

## 2. How the Domestic Supply Price Index is Compiled

### 1. Definition and Use

- The Domestic Supply Price Index measures changes in the price of goods and services supplied to the domestic market by the stages of processing.

### 2. Method of Compilation

- The Index aggregates and reclassifies the items in the Producer Price Index and Import Price Index.
- When the items in the Import Price Index are compiled by the prices at the contract point, are used for compilation of the Domestic Supply Price Index, they are adjusted by the time gaps between the contract point and the customs clearance point.

#### Weight of Each Domestic Supply Price Index Category (as of 2025)

Category	Weight
Domestic Supply Price Index	1,000.000
Raw materials	87.778
Intermediate goods and services	612.603
Final goods and services	299.619

### 3. Notes on statistical use

- The final goods and services index seems to move similarly with the Consumer Price Index. The PPI, however, would show different movement patterns because it includes capital equipment that the CPI does not cover.
- The Import Price Index adjusted by the customs clearance time is different from the Import Price Index compiled by the contract prices.

#### Coverage of Each Index

	Producer Price Index	Import Price Index	Export Price Index
Goods	Goods produced and transacted in the domestic market	Imported goods	Exported goods
Services	Services produced and transacted in the domestic market	 <b>Domestic Supply Price Index</b>	

### 3. How the Total Output Price Index is Compiled

#### 1. Definition and Use

- The Total Output Price Index measures changes in the price of goods and services produced by domestic producers.

#### 2. Method of Compilation

- The Total Output Price Index aggregates and reclassifies the items in the Producer Price Index and Export Price Index.
- The Export Price Index is compiled from the prices set by a contract between two parties, and customs clearance time should be considered and reflected in the index.

#### Weight of Each Total Output Price Index Category (as of 2025)

Category	Weight
Total Output Price Index	1,000.000
Agricultural, forestry & marine products	23.802
Manufacturing products	600.529

#### 3. Notes on Statistical Use

- The Export Price index is adjusted by the customs procedure time and is different from the Export Price Index compiled by the contract prices.

#### Coverage of each Index

	Producer Price Index	Export Price Index	Import Price Index
Goods	Goods produced and transacted in the domestic market	Exported goods	Imported goods
Services	Services produced and transacted in the domestic market	 <b>Total Output Price Index</b>
